Restful Booker: API Findings

Defects and inconsistencies

#	Request	Expected	Actual	Severity
1	POST /auth with wrong credentials	401	200 with `{"reason":"Bad credentials"}`	High
2	POST /booking with a missing required field	400 with a message	500 Internal Server Error	High
3	POST /booking with wrong types (`totalprice: "abc"`)	400	Accepted	Medium
4	POST /booking with checkout before checkin	400	Booking created	Medium
5	POST /booking with an impossible date (2026-02-30) or negative price	400	Accepted	Medium
6	DELETE /booking/{id}	200 or 204	201 Created	Low
7	Authentication	One documented method	Cookie token and Basic auth both used; some requests need an Accept header	Low
8	POST /booking with malformed JSON	400 with a JSON error	400, but the body is plain text "Bad Request" although Accept is application/json	Low

Working as expected

- Malformed JSON is rejected with 400.
- Create returns an id and the same data.
- GET returns the created booking.
- PUT replaces all fields; PATCH changes only the fields sent.
- Unknown id returns 404.
- Missing or invalid token returns 403.
- A deleted booking returns 404.
